

The World Weather Research Programme

Chris Davis, Chair of Scientific Steering Committee
Shipra Jain, Vice-chair of the Scientific Steering Committee
Estelle de Coning, Chief of WWRP

WWRP Implementation Plan 2024- 2027

Goals

Advance Earth-system Science for Services, minutes to months

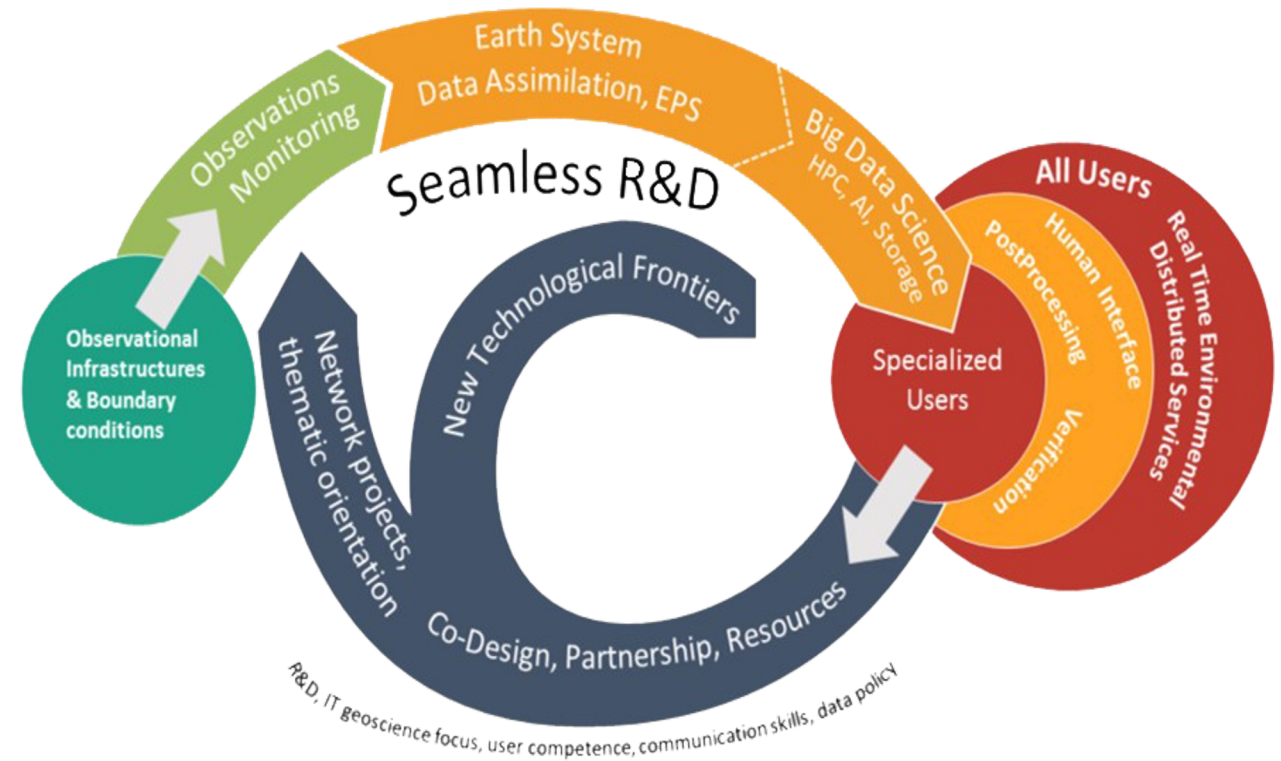

Enhance the warning process in a changing climate

Quantify, reduce and communicate prediction uncertainty

The Value Cycle Approach

Our Activities

AWAR3E

Advancing Weather Research to Reduce Risk to Societies

Nowcasting and Mesoscale Research

Data Assimilation and Observing Systems

Forecast Verification Research

Predictability, Dynamics and Ensemble Forecasting

Tropical Meteorology Research

Societal and Economic Research Applications

Expert Team on Weather Modification

Working Groups

Ending in 2025

Sciences for Services Projects

Tropical Cyclones - RDP (through 2025)

Aviation RDP (through 2025)

~35 endorsed projects

WORLD
METEOROLOGICAL
ORGANIZATION

Urban
PREDICT

**Developing and integrating
ultra-high-resolution weather
hazard forecasting for
enhances preparedness and
response in diverse urban
settings**

Key activities

- Selected case studies for urban cities
- Model intercomparison
- Multi-actor workshops to evaluate the findings and build trust
- Collaborative/co-creative multi-hazard vulnerability maps

WORLD
METEOROLOGICAL
ORGANIZATION

Integrated Prediction of Precipitation and
Hydrology for Early Actions

wpo.noaa.gov/inprha

Research Article in BAMS: 10.1175/BAMS-D-24-0332.1

Advance Research on
Developing Multi-Hazard
Flood Forecasting
Systems for Early
Warning From Minutes
to Days

Integrating precipitation
and hydrological
predictions, and social
sciences.

InPRHA project Goals

Goal 1

Engage with the diverse international communities of researchers, forecasters, practitioners and other stakeholders

Goal 2

Foster collaboration between research and operations towards better services, within national meteorological and hydrological services (NMHSs) and beyond

Goal 3

Bring together knowledge from different disciplines (meteorology, hydrology and the social sciences) and cultures, with particular consideration for the most vulnerable and least developed communities

Goal 4

Rethink the flood warning process, in a non-stationary system, by taking into account anthropogenic influences and changes on climate, land and water, as well as societal interactions, considerations and perception

1950-2025

SCIENCE for ACTION

PCAPS

POLAR COUPLED ANALYSIS
AND PREDICTION FOR SERVICES

Aims at improved
prediction services for the
polar region

<https://www.wwrp-pcaps.net/>

Improving coupled weather and climate forecasting models, as well as on increasing the understanding of user requirements (user groups, products, timeliness, access, and scale)

Project Goals

- Advance scientific knowledge of the Earth system
- Enhance the science-for-service value cycle to ensure that scientific and technological advances improve predictive capabilities and analysis
- Advance and contribute to policy-relevant science

Progressing EW4All Oriented to Partnerships and Local Engagement

<https://wmo-people.du.ac.bd/>

To develop a set of characteristics and typologies for anticipatory risk governance for sustainable and equitable early warning systems for all.

To identify barriers and enablers of socially inclusive early warning systems

To identify context-appropriate approaches that can sustain actionable early warning systems that adapt to reflect the changing environmental and social risk context

Agriculture
Energy
Disaster Risk Reduction
Health

Advance our understanding of how and where sub-seasonal to seasonal forecast information is and can be used to support decision-making

Advance our understanding of the skill and uncertainty and their sources

Develop methods for incorporating sub-seasonal forecasts and their associated uncertainty into decision-making and evaluating the worth of forecast information

Develop the community of scientists and practitioners who can advance the use of sub-seasonal to seasonal forecasts in decision-making

Existing/Possible Connections with WGNE

- **JWGFVR:** Verification of AI models in operational centres workshop (October 2025), WP-MIP
- **PDEF, DAOS, TMR, JWGFVR:** Contributions to Weather Predictions through WP-MIP
- **NMR:** WIPPS pilot project assisting the implementation of experimental AI-based nowcasting solutions (lightning and rainfall) in developing countries (or data-sparse regions)
- **InPRHA:** Contributions through projects and joint initiatives, e.g., pilot project AI flood forecasting SC-HYD (SERCOM) and ensemble inundation forecasting methods using AI for rapid inundation mapping
- **PCAPS**
 - **Verification Task Team (next slide)**
 - **AI-based sea-ice forecasting**, ORCAS Task Team anticipates producing a report by mid-2026 summarizing optimal observation and model data types, formats, and resolutions for AI model development and evaluation.
- **Urban-PREDICT:** The feasibility of sub-km-scale NWP; uses of ML for prediction with diverse data streams
- **SAGE:** Predictability in the coupled system for weeks 2-5.

PCAPS Verification Task Team

 Advance operational verification practices over Antarctic and Arctic regions

 Regular discussions on recent weather verification results from forecasting centres

 Protocol for exchanging sea-ice verification scores

 Identification of baseline verification-reference products and uncertainty assessment

 Development of diagnostics capturing model coupling, resolution, and extremes

 Co-development of user-focused verification for precipitation, clouds, visibility, wind
